Cloning is making of identical copies. DNA cloning is process of making several identical copy of a gene or gene fragment. DNA fragment from an organism is cleaved or amplified and inserted in a DNA carrier

called vector. Fri, 14 Sep 2018 20:03:00 GMT Lecture 35: Basics of DNA Cloning-I - Gene cloning is a common practice in molecular biology labs that is used by researchers to create copies of a particular gene for downstream applications, such as sequencing, mutagenesis, genotyping or heterologous expression of a protein. Gene Cloning and DNA Analysis - BookShout - gatedâ€™by cloningâ€™bananas, grapes, apples, sugar cane, pineapples, potatoes, asparagus, and many other plants. Identical twins and triplets that occur among many multicellular animal species including humans, are derived by a cloning process. A cell, isolated from other cells growing in a culture dish, gives rise after cell division to a clone. Cloning: Past, Present, and the Exciting Future -
