General Galois Geometries | J.W.P Hirschfeld | Springer - Abstract. We generalize and complete several characterizations of the finite quadric Veroneseans surveyed in Hirschfeld and Thas, General Galois Geometries, OUP, 1991. Our main result is a characterization of the quadric Veronesean $V_{n-2, n}$ in terms of the subspaces of the ambient projective space generated by the sub ∞ •Veroneseans isomorphic to $V_{n-1, 2n-1}$. Characterizations of the finite quadric Veroneseans $V_{n-2, n}$... -
