Wiktionary - FORCES . A
force is any push or pull
that causes an object to
move, stop, or change speed
or direction.; The greater
the force, the greater the
change in motion will be.
The more massive an
object, the less effect a
given force will have on the
object.; Unless acted on by
a force, objects in motion
tend to stay in motion and

Monroe Authority - The
Moon (Latin: luna) is
Earth's satellite, and we
usually see it in the night
sky. Other planets also have
moons or "natural
satellites". Our moon is
about a quarter the size of
the Earth. Because it is far
away it looks small, about
half a degree wide. The
gravity on the moon is
one-sixth of the Earth's
gravity. It means that
something will be six times
lighter on the Moon than on
Earth. Sat, 08 Dec 2018
